

## **Newly Formed California Code Compliance, Inc. Offers Inspection and Compliance Services For OEMs and Manufacturing Operations**

Saratoga, CA—April 14, 2008— California Code Compliance, Inc. (CaCCi), a new inspection and compliance service firm, has been formed to help manufacturers and manufacturing operations manage risk and reduce liability with strategic programs that ensure their electronic and heavy machinery complies with global safety and manufacturing standards.

Carol Foster has been appointed president of CaCCi with corporate headquarters based in Saratoga, CA. Joining Foster is Howie Foster as Operations Director and Michael LaFrance as Technical Director. Steven Simons is Director of Eastern Operations and manages the east coast satellite office located in New Fairfield, CT. Steve is also the company's RF and EMC Testing Specialist. The technical staff includes an electrical P.E. with complete electrical distribution design and facilities engineering background and additional experienced field inspectors.

“With product liability and safety lawsuits on the rise in the United State and the European Union (EU) that are capable of devastating the reputation and financial standing of a manufacturing corporation, we formed CaCCi to help companies with an economic and turnkey solution to prevent this from happening,” said Foster. “Our team has over 175 years of combined manufacturing experience, and that enables CaCCi to deliver a depth and breadth of expertise on the most critical domestic and international standards.”

CaCCi services include consultation, development, training and execution on compliance programs that address such standards as CE Marking (or CE Mark), SEMI<sup>®</sup> S2, SEMI<sup>®</sup> S2-93A, National Electrical Code (NEC), NFPA 70, Restriction of Hazardous Substances Directive or RoHS, Waste Electrical and Electronic Equipment Directive (WEEE), OSHA and more.

Additionally, CaCCi conducts third party field inspection, labeling and manual review for equipment used in manufacturing processes including automotive, semiconductor, flat panel, optical, solar cell, and food processing industries.

“We believe that companies using CaCCi's services will benefit by producing the most compliant products and having the safest work facilities which will reduce potential liability and strengthen public trust in responsible business practices. The end results are

increased safety, higher corporate profits through greater equipment and workforce up time, and lower insurance premiums,” adds Foster.
